

**CURRICULUM VITAE (CVA)**

**IMPORTANT – The Curriculum Vitae cannot exceed 4 pages. Instructions to fill this document are available in the website.**

**Part A. PERSONAL INFORMATION**

**CV date** 2021/11/29

First name	Oier		
Family name	Etxebeste Juárez		
Gender (*)	Male	Birth date (dd/mm/yyyy)	21/02/1978
Social Security, Passport, ID number	72469732K		
e-mail	oier.echeveste@ehu.eus	URL Web	
Open Researcher and Contributor ID (ORCID) (*)	0000-0002-9786-6091		

(\*) Mandatory

**A.1. Current position**

Position	Assistant Professor		
Initial date	2019/01/01		
Institution	University of the Basque Country		
Department/Center	Applied Chemistry	Faculty of Chemistry	
Country	Spain	Teleph. number	0034 943018517
Key words	molecular biology, genetics, filamentous fungi, development		

**A.2. Previous positions (research activity interruptions, art. 14.2.b))**

Period	Position/Institution/Country/Interruption cause
2013/01/06-2018/02/28	Lecturer

**A.3. Education**

PhD, Licensed, Graduate	University/Country	Year
PhD	UPV/EHU	2008

**Part B. CV SUMMARY (max. 5000 characters, including spaces)**

Etxebeste began his scientific career in the field of Microbiology in 2004, at the Univ. of the Basque Country (UPV/EHU). PhD in 2008, he published his first manuscript as the first author that year, with the functional characterization of two proteins controlling the development of filamentous fungi. His scientific career continued with two research contracts at CIC-Nanogune (2008) and CIB-CSIC (2009), being also granted with an EMBO short-term fellowship grant for a stay at the lab of R. Fischer in Karlsruhe (Germany, 2009). In 2009-2010, Etxebeste published two manuscripts as the first author and two as the second, followed by two reviews. The second review closes the first stage of his scientific career, since it updates the molecular models for the control of fungal development and provides with a new perspective based on the participation of a limited number of proteins with specific functions at each developmental stage. These works were acknowledged with the covers of the journals Microbiology (12/2009) and Trends in Microbiology (12/2010).

During his stay at CIB-CSIC, Etxebeste was introduced in the field of cargo trafficking between the nucleus and the cytoplasm. In 2011 and 2013, he published two manuscripts (2nd and 1st author, respectively) describing the dynamics of nuclear importers and exporters in fungal vegetative cells. The second one established similarities in the cytoplasmic dynamics of the main nuclear importers of neurons and fungal cells. Etxebeste's postdoctoral stage continued at UPV/EHU from 2010 to 2013. In 2013, he obtained a Lecturer position at the Faculty of Chemistry. He is now Assistant Professor (Microbiology).

In 2015, he published a second manuscript as senior author, which would lead to the first thesis supervised by Etxebeste (2016). The quality and impact of this work were acknowledged with the cover of the journal *Genetics* (04/2015). In another manuscript published in 2015, in which Etxebeste was the corresponding author, similarities between the long-distance subcellular dynamics of specific transcriptional regulators of neurons and hyphae were established. This made the two research fields Etxebeste had been working on converge: the control of fungal development and the cytoplasmic dynamics of nuclear importers. This research article was highlighted (Micro-commentary) by the journal *Molecular Microbiology* and the results led to the second thesis supervised by Etxebeste (2017). In 2016, Etxebeste published a review in *FEMS Microbiology Reviews* in which he proposed that filamentous fungi and neurons open multiple possibilities for the study of specific cellular processes of the other cell-type. Etxebeste continues working in the field of genetic control of fungal development and also in the identification of antifungal/fungistatic activities by lactic acid bacteria.

He has participated as researcher in projects of the Spanish Plan Nacional call and has been PI in projects funded by UPV/EHU and the Basque Government. Etxebeste teaches two topics in the Bachelor's Degree in Chemistry (12 ECTS/course) and another one in the Master in Chemistry and Polymers (3 ECTS/course). He has supervised 6 Master theses and 15 end-of-degree projects since 2012. He has supervised a third PhD thesis, passed with Cum Laude distinction in February 2021.
