Summary of CV

This section describes briefly a summary of your career in science, academic and research; the main scientific and technological achievements and goals in your line of research in the medium -and long- term. It also includes other important aspects or peculiarities.

From 2005 to 2011, I studied a degree in Biology and Biochemistry at the Universidad de Navarra (Pamplona, Spain). During the last year of my degree, I was an Erasmus student at the University of Groningen, where I carried out a research project on insect genetics at the Centre for Ecological and Evolutionary Studies (CEES). After graduating, I received a scholarship from "La Caixa" Foundation to study a Master of Advanced Genetics at the Universidad Autónoma de Barcelona. I carried out my Master project at the laboratory of Dr. Carles Lalueza-Fox, Institute of Evolutionary Biology (CSIC-UPF, Barcelona), where I became in contact for the first time with ancient DNA research and learned how Paleogenomics can be applied to study human history and the evolution of genetic variants with phenotypic and medical importance. Since I had always had great interest in the prehistory of the Iberian Peninsula, I decided to stay at the laboratory of Dr. Carles Lalueza-Fox to start a PhD, applying the new DNA sequencing techniques to the study of important questions related to the peopling of the Iberian Peninsula. During my PhD, funded by a Predoctoral fellowship from the Basque Government, we recovered the first complete genomes of a European hunter-gatherer (Olalde et al., *Nature* 2014) and a Cardial Neolithic farmer (Olalde et al., *Molecular Biology and Evolution* 2015), and used these data to look from a new perspective at one of the oldest debates in the field of archaeology, the relation between the Mesolithic hunter-gatherers and Neolithic farmers in Europe. We discovered that the Early Neolithic farmers were not direct descendants of the local Mesolithic hunter-gatherers, which indicated a large-scale demographic change during the Mesolithic-Neolithic transition. In September 2016, I moved to Boston to begin as a Postdoctoral Fellow at Dr. David Reich's group (Harvard Medical School), where I led two multidisciplinary projects involving more than 100 researchers. In the first one (Olalde et al., *Nature* 2018), winner of the 2018 Current Archaeology Award in the "Research Project of the Year" category, we carried out a genomic study of the Bell Beaker phenomenon, a Copper Age cultural complex that spread between 2,500 and 2,000 BC across western Europe and northwest Africa through both migration and cultural diffusion. In the second one (Olalde et al., *Science* 2019), we focused on a smaller geographical area, the Iberian Peninsula, but sampled a much wider time-span of 8,000 years to provide the most comprehensive view of human population history in this region with ancient DNA. Between October 2019 and May 2021, I continued my research career at the Institute of Evolutionary Biology (CSIC-UPF, Barcelona) with a "La Caixa Junior Leader" Fellowship, studying the social processes underlying the big ancestry changes uncovered in my previous work and also investigating the impact of human mobility and migration in the final genetic formation of present-day populations over the last two millennia (Olalde et al., *Biorxiv* 2021). Since May 2021, I continue these research lines as a Ramón y Cajal Fellow and Ikerbasque Research Fellow at the University of Basque Country, for instance with a project studying social organization at a Neolithic chambered tomb in Britain, recently published in *Nature* (Fowler & Olalde et al., *Nature* 2021).
